Cytology  Mini\*-single tissue  Mini\*-multi tissue  Single tissue  Multi-tissue  Gross Necropsy  
 \*Mini refers to a report that includes only a diagnosis and comment (no written microscopic description)

Duration of illness:

Clinical Diagnosis:

History, clinical data, description and location of lesions or necropsy findings:

Cytologies should be submitted, stained and unstained, in plastic slide holders. Biopsies should be submitted in an adequate amount of formalin. Small representative sections of necropsy tissues should be submitted with an effort to avoid redundant collection of specimens from any one tissue. Small birds may be submitted whole submerged in formalin, with the skull cap and sternum removed. Small turtles may be submitted whole with the plastron removed. Other small animals (some lizards, amphibians rodents, fish) may be submitted whole with the coelomic/abdominal cavity opened. Animals submitted whole in formalin are charged as multiple tissue cases (not necropsies).
